UM1 Micro / AirLine

The UM1 Micro/AirLine System is a high-performance UHF wireless system at prices that make sense for all kinds of video professionals. The UM1 Micro Diversity receiver operates on the 800 MHz frequency UHF band where there's much less RF interference. Truly compact, it mounts easily onto virtually any type of video camera. Equipped with sophisticated new circuitry for superior reception and crystal-clear audio, the UM1's wide range of features make it ideal for commercial videographers, corporate and broadcast video professionals. The system includes Samson's AirLine transmitters which feature patent-pending technology to stabilize transmission.

The UM1/AirLine is available in a variety of configurations including, Handheld systems, lavalier Systems & Headsets systems.
